OVERVIEW OF THE MONTH

Happy 2023 everyone!

Thank you all for your support over the years. We expect that the new year will be filled with more exciting events and opportunities! The year has begun with the announcement of our 2022 Annual Report. Providing a comprehensive overview of the Murney Tower Museum's activities throughout 2022, this report covers seven major areas of work, onsite operations, collaborative initiatives, public programming, special events, collections, publicity, and community outreach, which defined our activities in 2022. We also have an exciting job opportunity at the museum. We are also looking for three museum assistants to join our team this summer. Working closely with the museum's manager/curator from May through September, the assistants will gain invaluable experience and develop skills in all aspects of museum operations.

Our year here at Murney Tower Museum is off to a booming start. We have some exciting collaborations and much-appreciated support coming up, so read on to find out more!

We are looking for three museum assistants to join our team this summer.

For the job description and how to apply:

Thank you, the City of Kingston!

We are delighted to announce that our museum was selected to receive an operating grant and a bilingual content development grant from the City of Kingston Heritage Fund (CKHF), which will allow the museum to build capacity and continue its operations in 2023. The CKHF provides support for museums, heritage projects, cultural groups, and historical societies in Kingston in order to improve how our city's stories are told locally and to the world. The CKHF is administered by the Kingston and Area Association of Museums, Art Galleries and Historic Sites (KAM) on behalf of the City of Kingston. We are so grateful to have been selected as a recipient of the CKHF and we look forward to continue serving our community this year!

Queen's ASPC Course

This year we are participating in Queen's University Engineering Department's ASPC 100 course, which provides an opportunity to apply engineering science and mathematics content in situations emulating professional practice. Over the course of the next three months, first-year engineering students will be working on developing a small, three-dimensional version of the Murney Tower for visually impaired individuals. The goal of this creation is to help visually impaired visitors to experience the tower and understand its overall structure and systems. We are looking forward to sharing the final products with you in the coming issues!

20TH ANNUAL
BROCKVILLE MUSEUM
LECTURE SERIES
